

Speciality Testing Services

LABORATORY
TESTING

We bring a personal sense of commitment and connection to our partners and have a deep responsibility to do the right thing for food and the environments it comes from.

The dedicated team at our speciality laboratory provide contaminants and residue testing services for the food and environment sectors. These include pesticide and veterinary medicine residues, persistent organic pollutants (POPs) and contaminants of emerging concern (CECs).

Our facilities are ISO/IEC 17025 accredited and our capability includes sample analysis for chemical exposure and risk assessment projects related to impact on plant, animal, ecosystem and human populations and ecosystem assessments. Using state-of-the-art instrumentation which can determine both known and unknown analytes, together with internationally benchmarked methodologies, we provide accurate testing services with competitive turnaround times.

Our testing services include:

- Pesticide and other agricultural residues
- Veterinary medicine residues
- Environmental contaminants (including PFAS, POPs and CECs)
- Packaging and process contaminants
- Forensic identification of foreign matter in food
- Project-specific method development

Our web-based system delivers a smooth and transparent customer experience through fast processing and secure access to results in real-time - 24 hours a day, seven days a week, from sample reception through to completion.
